

The dataset is from all non-donor egg fresh transfers January 2008 to August 2010, n=365.

The monozygotic twin rate is 4.0%.

The dizygotic twin rate is 57.0%.

The filter "two blastocysts" eliminated transfers for women 41-42y, for whom I will usually transfer 3 or more embryos. The clinical pregnancy rate is 15.6% in this age group.

Our clinical pregnancy rate for single embryo transfer is 10/32 (all ages). Our clinical pregnancy rate for day 3 transfer is 19/80 (all ages).
